DETAILED ACTION

Priority

- ✓ 1. The instant application claims CIP priority to multiple U.S. patent applications as well as priority to a provisional application. An examination of the parent applications shows that the requirements of claim 1 can be found in application number 09/107,912 now patent 6,122,564 A having a priority date of 1 June 1998, with the exception of the "Semiconductor Diode Laser" limitation of claim 1 which has a priority date of 27 July 2000 from the provisional application.

Drawings

- x 2. New formal drawings will be required subject to the allowance of this application. Figures 1-6 contain hand drawings and/or numbering. These drawings do not conform to the patent office requirements. While these drawings are acceptable for the analysis of the application, pending allowance the applicant is advised to employ the services of a competent patent draftsman outside the Office, as the Patent and Trademark Office no longer prepares new drawings.

Specification

- x 3. The abstract of the disclosure is objected to because it contains the purported merits of the invention. The abstract should be a 50-150 word summary of the invention. Correction is required. See MPEP § 608.01(b).

4. The disclosure is objected to because of the following informalities:

- a. Page 4, line 19: Drawing item numbers "20" and "30" cannot be located in figure 1.
- b. Page 5, line 12 – The feedback controller should be drawing item number "104" not "80" per figure 1.
- c. Page 5, line 13 – The numerical controller should be drawing item number "108" not "90" per figure 1.
- d. Page 5, line 16: Drawing item numbers "20" and "30" cannot be located in figure 1.
- e. Page 6, line 19: Drawing item numbers "301" cannot be located in figure 3.

Appropriate correction is required.

5. The errors noted by the examiner may not constitute all of the aberrations in the specification. The applicant is encouraged to thoroughly review the specification and correct any informality encountered.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

7. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Kar et al. (USPN 6,526,327 B2).

The limitations of claim 1, and the applicable citations in Kar et al., are as follows:

1. A system for automatically controlling the build-up of material on a substrate (column 1, lines 4-15), comprising:

a controllable semiconductor diode laser having a beam directed to a localized region of the substrate so as to form a melt pool thereon (column 8, lines 44-49);

a material feeder for feeding material into a melt pool to be melted by the beam to create a deposit having a physical attribute (column 6, lines 10-41);

an optoelectric sensor operative to output an electric signal as a function of the physical attribute (column 4, lines 21-23); and

a feedback controller operative to automatically adjust the rate of material deposition as a function of the electric signal (column 6, line 63-column 7, line 13).

The limitations of claim 1 are read in entirety in Kar et al.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
